CORPORATE COMPANY PROFILE

Who we are?

Since ASSAD started in 1997, we grown to meet the various economic and developmental needs of our clients in the Saudi market. Our team provides expert hands-on services to our valuable clients assisting them to run their core businesses more smoothly. Moreover, we deliver solutions with unrivaled speed and accuracy enabling our clients to stay ahead in their markets. Everything we do, and the way we do it, is driven by our core values: confidence, perceptiveness, and collaboration. These are the pillars that guide our companies; hence, contributing to the success of our clients around Saudi Arabia. We create communities, workplaces and infrastructure projects that help business succeed and people to thrive. We employ our decades-long experience, bold thinking, and global expertise to shape our community delivering innovative, sustainable places for governments, enterprises, communities and people. ASSAD can meet all requirements of civil and building construction services, industrial mechanical construction services, and tunnelling. We can provide plant expansion and ground-up construction services for Lump Sum Turnkey (LSTK), and Lump Sum Building (LSPB) projects. By combining technical expertise with immense knowledge of local markets and rich human capital, ASSAD ensures ample resources for the most demanding construction, operations, or maintenance projects.

CEO message

Since its establishment in 1997, ASSAD has grown into a large local contracting company, overcoming various obstacles through its challenging spirit and ability, to create new values and optimum solutions for our business partners.

As CEO of ASSAD, I firmly believe that if we can achieve a place in the mind of our customers as a provider of innovative solutions that suit every need and fulfill all dreams, the possibilities for the growth of ASSAD will be unlimited no matter how challenging the market environment.

Ahmed AlZaharani

ASSAD continuously has striven to enhance competitiveness by creating new values in a fluctuating market under our vision of being "Value No.1 Solution Provider".

We are committed to providing you the best value by building an advanced business portfolio between our existing and new business areas. Furthermore, we strive to enhance shareholder value and to be a social-friendly company through ESG management.

ASSAD would like to express our sincerest gratitude for your continued interest and support.

We pledge to you that everyone at ASSAD will work together to be a better company.

Thank you.

CORPORATE INFORMATION

Assad Al Mamlakah Contracting Co. Abqaiq, Saudi Arabia

What Drives Us?

Our Vision

To be the contractor of choice for value minded clients and high performing employees.

Mission

Become the customers' most preferred choice by attaining excellence in quality and timely completed value-added projects. Develop high performing people that deliver successful projects exceeding our customers' expectations in a safe environment. Build on a tradition of trust through dedication, collaboration, customer satisfaction, and value creation. Build long lasting relationships with our customers through professionalism & honesty.

Values & Culture

INTEGRITY	Understanding, firm but fair, honest and transparent.
TEAMWORK	Encouraging collaboration and mutual support to reinforce our one -team approach.
RESPECT	With due regard to the feelings, wishes, contributions and opinions of others.
COMMITMENT	Dedication to achieving excellence in all aspects of our business
INNOVATION	Encouraging new ideas that contribute to the success of the company.

Our Code of Conduct

We aspire to operate with a high level of ethics in line with our values. Setting the direction needed to achieve this are ASSAD Code of Conduct and Supplier Code of Conduct.

Sustainability

Every organization has an impact on the committee around it. Being a responsible business means being transparent about what these are, measuring them accurately and then acting to minimize them. That's what we are doing as part of our sustainability strategy as we work to protect the environment and help people thrive.

Our Approach

We believe in doing business in a way that is fair, transparent and, above all, safe and sustainable

How we deliver

Our ability to deliver certainty for our clients is based on an operating model that differs from those of our competitors.

Creating social value

Building a legacy is a key area of focus for all our projects

What we do?

CONSTRUCTION & BUILDING

Construction is our bread and butter. It's what we do. But to us, there is so much more to construction than just laying bricks and mortar. Behind every successful building project lies trusted relationships, dedicated people, and a commitment to getting the job done right. We shape cities, reimagine communities, and create places, for everyone.

ASSAD push boundaries to create iconic places that are innovative, sustainable and commercially viable. Our clients come to us when it's important: to handle complexity, drive delivery, offer strategic and long-term value, and to create innovative solutions.

Sector expertise:

- **COMMERCIAL & HOPITALITY**

Our passionate team of project management specialists combine fresh thinking and experienced hands to create outstanding projects that are innovative, sustainable and commercially viable. From signature buildings to building refurbishment programs, we leverage our international experience to deliver projects that give our customers a competitive edge. We also help our clients to build hotels and hospitality venues that are highly coveted, popular destinations. Through our established network of hospitality industry partners and consultants, we can make even the most ambitious design concepts a reality.

- **EDUCATION**

We work closely with our education clients, striving to provide outstanding, flexible facilities to meet the requirements of students, staff, and the research community. We were one of the major contractors to Build the Education Revolution, which provided new and refurbished infrastructure. We also work closely with major Saudi tertiary education facilities to deliver important, bespoke capital works programs to meet the needs of students, staff and stakeholders.

● **MANUFACTURING / INDUSTRIAL**

We have the experience and expertise to handle any industrial job, anytime, anywhere. In addition to our uncompromising commitment to safety and quality, we offer value engineering, comprehensive constructability reviews and stringent cost controls which results in budgets and schedules that you can depend on.

● **SPORT & ENTERTAINMENT**

Unlike commercial office buildings, these projects require an intimate understanding of acoustics, lighting and spatial orientation. We make partnerships with local and global leaders to deliver the best for our clients.

● **DATA CENTERS**

We understand the unique requirements of data center and mission-critical facilities construction. Reliability, flexibility, redundancy and security are all essential to keeping a critical service facility consistently up and running. We are engaged at every stage of the project from infrastructure development and single point-of-failure identification, to systems procurement, construction, startup and commissioning.

● **ELECTRICAL CONSTRUCTION**

We cover AC/DC power systems, alternative power solutions, cable trays, building lighting, intelligent highway systems and a lot more. ASSAD delivers expert electrical system design and implementation.

● **CIVIL WORKS**

Our capability covers: Earth Works, Foundation Work, Building Construction & Maintenance, and Road Construction.

● **MECHANICAL CONSTRUCTION**

From building automation systems to chillers to industrial process piping, ASSAD offers a robust list of mechanical construction capabilities, backed by a team capable of delivering fast-track schedules and the industry's most rigorous standards. Example of what we do: Drainage System, Plumbing System, and Pipe Construction.

● **FIRE PROTECTION**

ASSAD also provides life-safety systems—including fire detection and suppression—and the most advanced security technology available today. Backed by licensed technicians, we can design, install, test, repair, and upgrade a wide range of equipment.

- **FOUNDATION & WATERPROOFING**

Modern drain systems and waterproof finish.

- **FINISHING WORKS**

High quality finishing works performed by experienced specialists.

- **FACADE WORKS**

Facade plastering, finishing with stone.

- **DEMOLITION & EXCAVATION**

Thorough preparation for an uninterrupted process.

MICRO TUNNELLING

Our Slurry Machines with a cone crusher are all-rounders for safe tunnelling in the diameter range of 0.4 to around 4 meters. These micro tunnelling experts show their full potential particularly in non-accessible machine sizes. The slurry-supported excavation concept makes it possible to use these machines in all kinds of ground conditions, ranging from silt to clay to incohesive soils, and further to gravel and rock. Depending on the diameter, this is possible both in pipe jacking and for segmental lining.

The Machines belong to the category of closed, full face excavation machines with a hydraulic slurry circuit. The soil to be excavated is removed using a cutterhead adapted to the respective geology. This makes it possible to use the machines in almost all geological conditions. In soft soils and mixed geologies, standard or mixed ground cutterheads are used, while a rock cutterhead with disc cutters is used for tunnelling in stable rock formations. A cone-shaped crusher inside the excavation chamber crumbles stones and other obstructions to a conveyable grain size while tunnelling and advancing. Afterwards, the material falls through openings like a strainer in front of the suction port and is then removed through the slurry line together with the suspension. The excavation diameter can be enlarged using an upsize kit and a modified cutterhead. This means that the AVN Machine can be used to tunnel different diameters and for different types of pipes.

AVND Machines are equipped with an additional pressure chamber behind the excavation chamber. AVN technology has been expanded to offer extra safety in non-homogeneous, less stable geological conditions and for larger diameters. Like Mixshields, the support pressure is controlled using a communicating pipe and an automatically controlled air cushion inside the pressure chamber. This allows for even more precise control at a heterogeneous tunnel face and reduces the pressure peaks in the excavation chamber. This makes AVND Machines specialists for tunnelling operations sensitive to settlement even under high groundwater pressure and with shallow overburdens.

LANDSCAPE

We pride our good links and co-operation with landscape architects and value their advice, recommendations, and expertise.

We have the capacity to undertake substantial soft and hard landscaping projects in conjunction with landscape architects, developers, main contractors and clients.

We have the expertise to undertake a full range of commercial landscaping service including:

- a.** Access to growers with the highest quality plant material
- b.** Coastal reclamation projects
- c.** Experienced staff
- d.** Fencing (Stainless steel palisade / post and rail etc.)
- e.** Ground cultivation and site preparation
- f.** Grass sod laying
- g.** Irrigation
- h.** Paving
- i.** Plant sourcing
- j.** Play equipment installation
- k.** Retaining walls
- l.** Tree felling
- m.** Tree transplants

We provide full-service landscape maintenance for commercial, industrial & municipal properties.

We participate in maintenance contracts put to tender as well as the private market corporate clients landscaping maintenance needs. We can design a landscaping maintenance program to suit your site and budget covering all aspects of the landscape including irrigation efficiency, plant health, turf care and remedial landscaping when necessary. Maintenance is an essential part of ensuring the landscaping continues to fulfill the role intended i.e., to enhance the outdoor space for your enjoyment, remain an asset to your investment and create an environmentally friendly area within an urban setting. Our landscape management philosophy approaches the maintenance of the landscape from a comprehensive, long-term perspective. We understand the needs of the landscape including soil, plant material and the specific ecosystem. Through our landscape assessment plan, we also include your budgetary and site management requirements into our program.

- General cleaning and weeding of beds
- Re-planting annuals Straightening or re-staking trees
- Mulching / composting beds
- Pruning trees and hedges
- Deadheading plants & hedges
- Sweeping paved areas
- Monitoring irrigation system and reporting
- Irrigation maintenance

LIGHT & HEAVY EQUIPMENT RENTAL SERVICES

With our partners, ASSAD established its Equipment Division with a vision to provide totally engineered solutions to the logistics industry. We are one of the leading service providers in leasing of construction equipment in the Saudi market with excellent quality of service.

We rent generators, compressors, steam boilers, access equipment, lighting, fencing, plant, oil & gas equipment, Sweepers, Skid steer, wheel loaders, SOIL COMPACTOR, Excavator rollers, Telescopic handlers, Cranes, Forklift and material lifters, welding equipment, Air Compressors, Buses, Pickups, Cars

FACILITY MAINTENANCE SERVICES

There are three critical goals of facility maintenance. Those are: Maximize the assets utilization, Reduce the recurring maintenance problems, and minimize the facility down time. Extending the longevity of these assets helps in: Savings in OPEX and CAPEX, enhance profit margins, and Increase ROI for your organization.

We assure quality, provide risk management, cost optimizations, maintenance, and operations management. With ASSAD, you can expect a complete range of facility management solutions from painting to landscaping and water feature maintenance.

Our Services in this sector covers:

- Building Maintenance
- Cleaning Services
- Technical Services
- Installation Works
- Electrical
- Mechanical

DESALINATION

With our partner, we offer a wide range of standard & custom-built Desalination Plants using Reverse Osmosis technology, for Brackish Water & Seawater applications, with a wide range of capacities reaching thousands of cubic meters per day. Our Desalination Plants can be supplied skid-mounted to be installed inside a building or can be supplied to site, containerized, and prepackaged, ready to begin operation immediately. Our systems can purify water with salinity of up to 55.000mg/l, and with high levels of turbidity, suspended solids, & heavy metals contamination. Using only the latest in technology breakthroughs, our integrated desalination plants are typically divided into three major treatment sections:

- Pre-treatment Section: designed using multimedia filtration or membrane technology.
- Depending on client requirements.
- Desalination Section: which is always designed with energy saving as a priority.
- Post-treatment Section: which includes chemical conditioning.

All our Plants are controlled by advanced instrumentation and Programmable Logic Control &/or SCADA systems.

WATER TREATMENT

Conventional water treatment plants we offer are designed to treat Surface Water and River Water bringing water supply to drinking water standard with many of our designed and built plants successfully operating in the MENA region, we constantly provides our clients with optimum water treatment solutions based on required capacity, type of water to be treated and plant location, thereby guaranteeing the minimum possible Operation & Maintenance cost.

The multi-stage Water Treatment Plants can be designed using Concrete/Steel tanks or can be designed to be Containerized Compact or Mobile Plants. They generally contain chemical treatment systems such as coagulation, flocculation and disinfection units, physical treatment systems such as sedimentation and clarification as well as advanced treatment systems such as gravity or pressure filtration, and softening units.

Our water treatment plants insure the removal of all types of surface water pollutants & contaminants such as high suspended solids, clay, as well as bacterial contaminations.

WASTEWATER TREATMENT

Wastewater Treatment Plants can be customized to treat different types of Municipal and Industrial wastewater, achieving the product water quality required by clients whether it's for disposal, immigration, reuse, or even for human consumption.

Our plants & systems can treat wastewater contaminants such as oil & grease, heavy metals, BOD, COD, suspended solids. odor and other environmentally harmful components. Accordingly, we can provide various types of wastewater treatment plants utilizing various technologies, to be designed according to type of waste to be treated as well as client/project requirements. These plants can be installed in concrete and/or steel tanks or supplied containerized ready for immediate operation. The technologies used are:

- Extended Aeration with Activated Sludge Technology.
- MBR Technology.
- MBBR Technology.
- Extended Aeration Lagoons Technology.

Our chemical, physical and biological treatment systems cover all stages of wastewater treatment from Primary stage (prescreening, oil traps, sedimentation and flow equalization) to Secondary stage (aeration/final sedimentation), to Tertiary stage (filtration & disinfection) and finally Advanced Treatment [micro-filtration & membranes separation). Advanced sludge treatment/handling units can also be integrated in our plants minimizing the plants' sludge production as well as meeting applicable environmental regulations.

DISINFECTION

With our partner, we are a leader in Disinfection technology and offers a wide range of processes for various applications. Whether the requirement is for gas chlorination, chlorine dioxide, ultraviolet or ozone disinfection; we offer the right equipment. ASSAD installations disinfect and sterilize, daily, thousands of cubic meters of water in food industry, water bottling as well as potable and wastewater plants. All applications are automatically controlled ensuring proper and continuous disinfection and protection of water streams."

The System components are designed & manufactured for superior chemical resistance according to the highest standards and are interconnected with rigid & flexible tubing and piping.

We disinfection systems are fully equipped with auxiliary safety, handling, scaling and storing equipment insuring the safe and user-friendly plant operation & maintenance.

TANKS

ASSAD offers the supply and installation of two types of Storage Tanks.

The first is Zincalume Corrugated Sheets Tanks with Liner on the inside. These tanks are made in Australia and are mainly used for Potable or Irrigation Water or other food grade fluids. They are High Quality Tanks made specially to withstand desert conditions, and only need a ring beam foundation as opposed to a full footing base. These tanks were used in a tank farm in the Red Sea Development Nursery Project. These tanks range in size from 6 m³ to 3,000 m³ and are easily erected and can be 100% dismantled and relocated.

The Second type is the Glass Fused to Steel tanks also known in the market as GLS tanks, They are perfect for storing Waste Water (municipal or industrial) as well as Potable water and Saline water. They are sturdy enough to install Scrapers and Aerators on them for STPs.
